DESCRIPTION

 Background
 TrkC Protein, a receptor tyrosine kinase, plays a crucial role in nervous system and potential heart development. Upon

 binding to its ligand NTF3/neurotrophin-3, TrkC undergoes autophosphorylation, initiating various signaling pathways such as the phosphatidylinositol 3-kinase/AKT and the MAPK pathways. These pathways are instrumental in regulating cell survival and differentiation, highlighting the pivotal role of TrkC in orchestrating essential cellular processes during development.
