

## VISTA/B7-H5 Protein, Cynomolgus (HEK293, Fc)

Cat. No.:	HY-P73482
Synonyms:	Platelet receptor Gi24; Stress-induced secreted protein-1; Sisp-1; C10orf54; SISP1
Species:	Cynomolgus
Source:	HEK293
Accession:	A0A2K5UV12 (F33-A194)
Gene ID:	102116468
Molecular Weight:	Approximately 44.9 kDa

### PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH <sub>2</sub> O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

### DESCRIPTION

Background	V-domain immunoglobulin suppressor of T cell activation (VISTA) is a B7 family member that maintains T cell and myeloid quiescence and is a promising target for combination cancer immunotherapy. VISTA, a type I transmembrane protein, is primarily expressed in hematopoietic cells. VISTA activity reprograms macrophages towards reduced production of proinflammatory cytokines and increased production of interleukin (IL)-10 and other anti-inflammatory mediators. VISTA not only acts as a ligand expressed on antigenpresenting cells, but also functions as a receptor on T cells. VISTA is an immune checkpoint receptor expressed on tumor-infiltrating T lymphocytes (TILs) and myeloid cells, leading to suppression of T cell activation, proliferation, and cytokine production, thereby promoting immune evasion and survival in a variety of human cancers, such as prostate cancer, non-small cell lung cancer (NSCLC), and colorectal carcinoma. VISTA is overexpressed in tumor tissues and functions as a co-stimulatory molecule <sup>[1][2][3]</sup> .
