

E-Selectin/CD62E Protein, Human (HEK293, Fc)

Cat. No.:	HY-P74162
Synonyms:	E-selectin; ELAM-1; LECAM2; CD62E; SELE
Species:	Human
Source:	HEK293
Accession:	P16581 (W22-P556)
Gene ID:	6401
Molecular Weight:	Approximately 85.4 kDa

PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 μ m filtered solution of PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/ μ g, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 μ g/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	E-selectin/CD62E Protein is a cell-surface glycoprotein that plays a crucial role in immunoadhesion. It mediates the adhesion of blood neutrophils in cytokine-activated endothelium by interacting with SELPLG/PSGL1. Additionally, E-selectin/CD62E Protein may be involved in capillary morphogenesis. It interacts with SELPLG/PSGL1 and PODXL2 through the sialyl Lewis X epitope, and it is worth noting that SELPLG sulfation is not necessary for this interaction.
