## CD83 Protein, Mouse (HEK293, His)

| Cat. No.: | HY-P74260 | ¢ |
| :---: | :---: | :---: |
| Synonyms: | B-cell activation protein; CD83 antigen; $\mathrm{hCD83}$; CD83; BL11 | S. |
| Species: | Mouse | $\stackrel{\square}{\square}$ |
| Source: | HEK293 | ® |
| Accession: | O88324 (M1-R133) | 0 |
| Gene ID: | 12522 | - |
| Molecular Weight: | 25-35 kDa |  |
| PROPERTIES |  |  |
| Appearance | Lyophilized powder. |  |
| Formulation | Lyophilized from a $0.2 \mu \mathrm{~m}$ filtered solution of PBS, pH 7.4. Normally $5 \%-8 \%$ trehalose, mannitol and $0.01 \%$ Tween 80 are added as protectants before lyophilization. |  |
| Endotoxin Level | $<1 \mathrm{EU} / \mu \mathrm{g}$, determined by LAL method. |  |
| Reconsititution | It is not recommended to reconstitute to a concentration less than $100 \mu \mathrm{~g} / \mathrm{mL}$ in $\mathrm{ddH}_{2} \mathrm{O}$. |  |
| Storage \& Stability | Stored at $-20^{\circ} \mathrm{C}$ for 2 years. After reconstitution, it is stable at $4^{\circ} \mathrm{C}$ for 1 week or $-20^{\circ} \mathrm{C}$ for longer (with carrier protein). It is recommended to freeze aliquots at $-20^{\circ} \mathrm{C}$ or $-80^{\circ} \mathrm{C}$ for extended storage. |  |
| Shipping | Room temperature in continental US; may vary elsewhere. |  |

## DESCRIPTION

## Background

The CD83 protein emerges as a potential key player in antigen presentation or the subsequent cellular interactions that occur following lymphocyte activation, underscoring its significance in immune processes. Its involvement suggests a potential role in orchestrating the presentation of antigens, a crucial step in immune recognition and response. Structurally, CD83 functions as a monomer, indicating its singular molecular form in executing its biological activities. Further exploration into the specific mechanisms by which CD83 participates in antigen presentation and lymphocyte activation could provide valuable insights into its pivotal role in shaping immune responses and cellular interactions within the immune system.
