DESCRIPTION

Background	<p>Thy-1 membrane glycoprotein (THY1, CD90) is a cell surface glycoprotein and member of the immunoglobulin superfamily of proteins. THY1 is involved in cell adhesion and cell communication in numerous cell types, but particularly in cells of the immune and nervous systems. THY1 is widely used as a marker for hematopoietic stem cells. THY1 may function as a tumor suppressor in nasopharyngeal carcinoma and may play a role in cell-cell or cell-ligand interactions during synaptogenesis and other events in the brain, facilitating communication and connections between cells, shaping neural network architecture and functionality^{[1][2]}.</p>
