Product Data Sheet

Fc gamma RIIIB/CD16b Protein, Human (NA2, CHO, His)

Cat. No.: HY-P75202

Synonyms: Low affinity immunoglobulin gamma Fc region receptor III-B; FcR-10; FCG3; FCGR3

Species: СНО Source:

Accession: O75015 (G17-S200)

Gene ID: 2215

Molecular Weight: 38-43 kDa

Ρ					

11101 2111120		
Appearance	Lyophilized powder.	
Formulation	Lyophilized from a 0.2 μ m filtered solution of PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.	
Endotoxin Level	<1 EU/µg, determined by LAL method.	
Reconsititution	It is not recommended to reconstitute to a concentration less than 100 $\mu g/mL$ in ddH ₂ O.	
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.	
Shipping	Room temperature in continental US; may vary elsewhere.	

DESCRIPTION

Background

The Fc gamma RIIIB/CD16b Protein acts as a receptor for the Fc region of immunoglobulins gamma, exhibiting low affinity and binding to both complexed or aggregated IgG as well as monomeric IgG. In contrast to Fc gamma RIIIA, Fc gamma RIIIB lacks the ability to mediate antibody-dependent cytotoxicity and phagocytosis. Instead, it may function as a trap for immune complexes circulating in the periphery, without activating neutrophils. The protein exists as a monomer and interacts with INPP5D/SHIP1, suggesting its involvement in intracellular signaling pathways associated with immune responses.
