

Product Data Sheet

EDA2R/XEDAR Protein, Human (HEK293, His)

Cat. No.: HY-P75728

Synonyms: Tumor necrosis factor receptor superfamily member 27; EDA-A2 receptor; EDA2R; TNFRSF27;

Human Species: Source: **HEK293**

Accession: Q9HAV5 (M1-T138)

Gene ID: 60401

Molecular Weight: Approximately 23-25 kDa due to the glycosylation.

PROPERTIES

Biological Activity

Immobilized Recombinant Human EDA-A2 at 1 μg/mL (100 μL/well) can bind Recombinant Human EDA2R. The ED₅₀ for this effect is 216.4 ng/mL.

Appearance

Lyophilized powder

Formulation

Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4.

Endotoxin Level

<1 EU/µg, determined by LAL method.

Reconsititution

It is not recommended to reconstitute to a concentration less than 100 μg/mL in ddH₂O. For long term storage it is recommended to add a carrier protein (0.1% BSA, 5% HSA, 10% FBS or 5% Trehalose).

Storage & Stability

Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.

Shipping

Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background

EDA2R/XEDAR Protein serves as a receptor specifically for EDA isoform A2, distinguishing it from isoform A1. This receptor plays a crucial role in mediating the activation of the NF-kappa-B and JNK pathways. The activation process appears to be facilitated through the binding of EDA2R/XEDAR to TRAF3 and TRAF6. Additionally, EDA2R/XEDAR forms associations with TRAF1, TRAF3, and TRAF6, indicating its involvement in intricate signaling networks. These interactions highlight the multifaceted role of EDA2R/XEDAR in cellular signaling pathways, emphasizing its potential impact on immune responses
