Product Data Sheet

LILRA5/CD85f Protein, Human (HEK293, Fc)

Cat. No.: HY-P75910

Synonyms: CD85 antigen-like family member F; ILT-11; LIR-9; CD85f; LILRB7

Species: HEK293 Source:

Accession: A6NI73 (G42-R268)

Gene ID: 353514

Molecular Weight: Approximately 52 kDa

				ES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 μ m filtered solution of PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconsititution	It is not recommended to reconstitute to a concentration less than 100 $\mu g/mL$ in ddH $_2$ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background

LILRA5/CD85f Protein is suggested to potentially play a role in triggering innate immune responses, indicating its involvement in the early defense mechanisms against pathogens. However, it does not appear to have a role in recognizing any class I major histocompatibility complex (MHC) antigens. This distinctive feature suggests that LILRA5/CD85f may exert its immune-modulating effects through pathways independent of class I MHC antigen recognition, highlighting its unique role in the intricate landscape of innate immune responses. The specific molecular mechanisms underlying its participation in triggering innate immunity remain to be fully elucidated, warranting further exploration into its functional significance in the context of the immune system.

Caution: Product has not been fully validated for medical applications. For research use only.
