

LILRB4/CD85k/ILT3 Protein, Human (Biotinylated, HEK293, His)

Cat. No.:	HY-P76440
Synonyms:	Leukocyte immunoglobulin-like receptor subfamily B member 4; CD85k; Liltrb4; Gp49b
Species:	Human
Source:	HEK293
Accession:	Q8NHJ6 (M1-E259)
Gene ID:	11006
Molecular Weight:	Approximately 27.7 kDa.

PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 µm filtered solution of PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	LILRB4/CD85k/ILT3, an inhibitory receptor, plays a pivotal role in immune regulation and the establishment of immune tolerance. Functioning as a receptor for FN1, apolipoprotein APOE, and ALCAM/CD166, this protein is involved in diverse cellular processes. It inhibits receptor-mediated phosphorylation of cellular proteins and the mobilization of intracellular calcium ions, and it further down-regulates FCGR1A/CD64-mediated monocyte activation, leading to reduced TNF production. Additionally, LILRB4/ILT3 impedes T cell proliferation, inducing anergy, suppressing the differentiation of IFNG-producing CD8+ cytotoxic T cells, and promoting the generation of CD8+ T suppressor cells. It induces the up-regulation of CD86 on dendritic cells and interferes with TNFRSF5-signaling and NF-kappa-B up-regulation. The inhibitory effects are at least partially mediated through interactions with FN1 and the phosphatase PTPN6.
