

## LIFR Protein, Human (Biotinylated, HEK293, His)

Cat. No.:	HY-P77060
Synonyms:	Leukemia inhibitory factor receptor; LIF-R; CD118
Species:	Human
Source:	HEK293
Accession:	P42702 (M1-S833)
Gene ID:	3977
Molecular Weight:	125-135 kDa

### PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 $\mu$ m filtered solution of PBS. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/ $\mu$ g, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 $\mu$ g/mL in ddH <sub>2</sub> O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

### DESCRIPTION

Background	LIFR protein acts as a signal-transducing molecule that may share a common pathway with IL6ST. Its soluble form functions as an inhibitor by blocking the binding of LIF to receptors on target cells, thereby suppressing its biological activity. LIFR forms a heterodimer with IL6ST, and this heterodimer interacts with the complex formed by CNTF and CNTFR, suggesting potential crosstalk and collaborative actions in cellular processes.
