

Product Data Sheet

MFAP3 Protein, Human (HEK293, Fc)

Cat. No.:	HY-P77085
Synonyms:	Microfibril-associated glycoprotein 3; MFAP3
Species:	Human
Source:	HEK293
Accession:	P55082-1 (A19-M147)
Gene ID:	4238
Molecular Weight:	Approximately 55-70 kDa

DDODEDTIES	
PROPERTIES	
AA Sequence	
0	
Appearance	
Formulation	
Endotovin Loval	
Endotoxin Level	
Reconsititution	
Storage & Stability Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein).	
Storage & Stability	
Shipping	

DESCRIPTION

BackgroundMFAP3 (Microfibril-associated protein 3) is a protein that plays a crucial role in maintaining cellular architecture. It functions
as a component of elastin-associated microfibrils, which are essential for providing structural integrity and elasticity to
various tissues in the body. By being involved in the formation and organization of these microfibrils, MFAP3 contributes to
the overall stability and functionality of tissues that require elasticity, such as blood vessels, skin, and lungs. Understanding
the role of MFAP3 can provide insights into the mechanisms underlying tissue development, maintenance, and potential
diseases related to abnormalities in cellular architecture.

Caution: Product has not been fully validated for medical applications. For research use only.
