

CD200R4 Protein, Mouse (HEK293, Fc)

Cat. No.:	HY-P77317
Synonyms:	Cell surface glycoprotein CD200 receptor 4; CD200RLa; Cd200r4
Species:	Mouse
Source:	HEK293
Accession:	Q6XJV4 (M1-T241)
Gene ID:	239849
Molecular Weight:	80-90 kDa

PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 μ m filtered solution of PBS, pH 7.4. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/ μ g, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 μ g/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	The CD200R4 Protein plays a significant role in the recruitment or surface expression of the TYROBP receptor, indicating its involvement in cellular processes related to immune regulation or signaling. The interaction with TYROBP underlines the molecular association that contributes to the functionality of CD200R4, potentially influencing downstream cellular responses. This interaction suggests a role for CD200R4 in mediating signaling events associated with TYROBP, highlighting its importance in immune modulation or other cellular activities that involve TYROBP signaling pathways.
