### DESCRIPTION

Background	Fibrin-as-protein 1, a member of the fibrinogen family, is a specific hepatocyte mitogen. FGL1 regulates the expression of proliferative factors, promotes liver regeneration and repairs liver injury. FGL1 inhibits T-cell activation by binding to LAG3. FGL1 promotes cell proliferation by activating the ERK/p-ERK pathway. FGL1 inhibits apoptosis of non-small cell lung cancer (NSCLC) cells by inhibiting PARP1/caspase 3 pathway <sup>[1][2][3]</sup> .
