

GFRA3/GDNFR-alpha-3 Protein, Human (HEK293, His-Fc)

Cat. No.:	HY-P77372
Synonyms:	GDNF family receptor alpha-3; GFR-alpha-3; GFRA3
Species:	Human
Source:	HEK293
Accession:	O60609 (M1-W382)
Gene ID:	2676
Molecular Weight:	Approximately 80 kDa

PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.2 μ m filtered solution of PBS, pH 7.5. Normally 5 % - 8 % trehalose, mannitol and 0.01% Tween 80 are added as protectants before lyophilization.
Endotoxin Level	<1 EU/ μ g, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 μ g/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	GFRA3/GDNFR-alpha-3 Protein functions as the receptor for the glial cell line-derived neurotrophic factor, ARTN (artemin). It plays a crucial role in mediating the autophosphorylation and activation of the RET receptor tyrosine kinase upon stimulation by artemin. Additionally, GFRA3/GDNFR-alpha-3 interacts with SORL1, indicating its involvement in various cellular signaling pathways.
