

PD-1 Protein, Human (Biotinylated, HEK293, His)

Cat. No.:	HY-P77509
Synonyms:	Programmed cell death protein 1; hPD-1; PDCD1; CD279
Species:	Human
Source:	HEK293
Accession:	Q15116 (L25-Q167)
Gene ID:	5133
Molecular Weight:	Approximately 17.4 kDa.

PROPERTIES

Biological Activity	Immobilized PD-1 Protein, Human, Recombinant (His Tag), Biotinylated at 2 µg/mL (100 µL/well) can bind PD-L1 Protein, Human, Recombinant (ECD, hFc Tag), the EC ₅₀ is 300-1500 ng/mL.
Appearance	Lyophilized powder
Formulation	Lyophilized from a 0.2 µm filtered solution of 50 mM MOPS, 500 mM NaCl, pH 7, 5% Trehalose, 5% Mannitol, 0.01% Tween-80.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	PD-1 protein functions as an inhibitory receptor on antigen-activated T-cells, playing a crucial role in the induction and maintenance of immune tolerance to self. Upon binding to its ligands CD274/PDCD1L1 and CD273/PDCD1LG2, PD-1 delivers inhibitory signals and associates with CD3-TCR in the immunological synapse, directly impeding T-cell activation. This inhibitory action is further executed through the recruitment of PTPN11/SHP-2, leading to the dephosphorylation of key TCR proximal signaling molecules. Exploited by tumors to attenuate anti-tumor immunity, PD-1's interaction with CD274/PDCD1L1 inhibits cytotoxic T lymphocytes (CTLs) effector function. Blockage of the PD-1-mediated pathway has shown promise in reversing the exhausted T-cell phenotype and normalizing the anti-tumor response, providing a rationale for cancer immunotherapy.
