

Product Data Sheet

AXL Protein, Human (HEK293, His-Avi)

Cat. No.:	HY-P77877
Synonyms:	Axl; UFO; AXL oncogene; AXL; ARK; JTK11; Tyro7; Al323647; EC 2.7.10; EC 2.7.10.1
Species:	Human
Source:	HEK293
Accession:	P30530 (A26-P449)
Gene ID:	558
Molecular Weight:	70-80 kDa

PROPERTIES Biological Activity Immobilized Human AXL, His Tag at 2µg/ml (100µl/well) on the plate. Dose response curve for Anti-AXL Antibody, hFc Tag with the EC ₅₀ of 11.2ng/ml determined by ELISA. Appearance Lyophilized powder. Formulation Lyophilized from a 0.22 µm filtered solution of PBS, pH 7.4. Normally 5% trehalose is added as protectant before lyophilization. Endotoxin Level <1 EU/µg, determined by LAL method. Reconsititution It is not recommended to reconstitute to a concentration less than 100 µg/mL in ddH ₂ O. Storage & Stability Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is
with the EC50 of 11.2ng/ml determined by ELISA.AppearanceLyophilized powder.FormulationLyophilized from a 0.22 µm filtered solution of PBS, pH 7.4. Normally 5% trehalose is added as protectant before lyophilization.Endotoxin Level<1 EU/µg, determined by LAL method.

Endotoxin Level <1 EU/μg, determined by LAL method.
Reconsititution It is not recommended to reconstitute to a concentration less than 100 μg/mL in ddH ₂ O.
Storage & Stability Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is
recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping Room temperature in continental US; may vary elsewhere.

DESCRIPTION

BackgroundThe AXL protein, a receptor tyrosine kinase, serves as a key mediator in transducing signals from the extracellular matrix
into the cytoplasm by binding the growth factor GAS6, thereby regulating diverse physiological processes such as cell
survival, proliferation, migration, and differentiation. Ligand binding at the cell surface induces AXL dimerization and
autophosphorylation. Upon activation, AXL interacts with and induces the tyrosine phosphorylation of various downstream
signaling molecules, including PI3-kinase subunits (PIK3R1, PIK3R2, and PIK3R3), GRB2, PLCG1, LCK, PTPN11, CBL, NCK2,
SOCS1, and TNS2. This triggers the recruitment of GRB2 and regulatory subunits of phosphatidylinositol 3 kinase, leading to
the downstream activation of the AKT kinase. The GAS6/AXL signaling axis plays a pivotal role in various processes such as
endothelial cell survival, optimal cytokine signaling during human natural killer cell development, hepatic regeneration,
gonadotropin-releasing hormone neuron survival and migration, platelet activation, and the regulation of thrombotic
responses. Additionally, AXL is involved in inhibiting Toll-like receptors (TLRs)-mediated innate immune responses, and in
the context of microbial infection, it acts as a receptor for lassa virus and lymphocytic choriomeningitis virus, possibly
through GAS6 binding to phosphatidyl-serine at the surface of the virion envelope.

Caution: Product has not been fully validated for medical applications. For research use only.
