DESCRIPTION	
Background	Apolipoprotein A-I (APOA1) Protein plays a pivotal role in the reverse transport of cholesterol, facilitating its efflux from tissues and functioning as a crucial cofactor for lecithin cholesterol acyltransferase (LCAT) to promote cholesterol excre from tissues to the liver. This protein exists as a homodimer and is part of the sperm activating protein complex (SPAP), which includes APOA1, an immunoglobulin heavy chain, an immunoglobulin light chain, and albumin. APOA1 also inter with APOA1BP and CLU, contributing to its diverse molecular associations. Additionally, it engages with NDRG1, SCGB3. NAXE, and YJEFN3, further highlighting its involvement in various cellular processes beyond cholesterol metabolism, including spermatozoa motility and protein complex interactions.
