

LILRB5/CD85c/LIR-8 Protein, Human (HEK293, His-Avi)

Cat. No.:	HY-P78485
Synonyms:	CD85C ; LIR-8; LIR8
Species:	Human
Source:	HEK293
Accession:	O75023 (R18-H456)
Gene ID:	10990
Molecular Weight:	67-72 kDa

PROPERTIES

Appearance	Lyophilized powder.
Formulation	Lyophilized from a 0.22 μ m filtered solution of PBS, pH 7.4. Normally 5% trehalose is added as protectant before lyophilization.
Endotoxin Level	<1 EU/ μ g, determined by LAL method.
Reconstitution	It is not recommended to reconstitute to a concentration less than 100 μ g/mL in ddH ₂ O.
Storage & Stability	Stored at -20°C for 2 years. After reconstitution, it is stable at 4°C for 1 week or -20°C for longer (with carrier protein). It is recommended to freeze aliquots at -20°C or -80°C for extended storage.
Shipping	Room temperature in continental US; may vary elsewhere.

DESCRIPTION

Background	LILRB5/CD85c/LIR-8 Protein appears to function as a receptor for class I MHC antigens, suggesting a pivotal role in immune recognition and modulation. Its capacity to interact with class I MHC molecules underscores its involvement in monitoring and potentially influencing immune responses. As a receptor, LILRB5 may contribute to the regulation of immune activities, particularly in the context of recognizing and responding to cells displaying class I MHC antigens. Further exploration of LILRB5's interactions and its impact on immune signaling could enhance our understanding of its role as a receptor and its potential implications in immune surveillance and modulation.
