DESCRIPTION

Background

CA125 protein is believed to serve a crucial role in establishing a protective and lubricating barrier against particles and infectious agents at mucosal surfaces. It exerts its functions through binding to MSLN, where the interaction mediates heterotypic cell adhesion. This adhesive property may play a significant role in the metastasis of ovarian cancer to the peritoneum, as CA125 initiates cell attachment to the mesothelial epithelium by binding to MSLN. The interaction between CA125 and MSLN underscores its potential involvement in the adhesive events associated with cancer metastasis, particularly in the context of ovarian cancer progression to the peritoneal cavity.
