

## CD20/MS4A1 Protein, Human (Trx-His, Solution)

Cat. No.:	HY-P7896
Synonyms:	rHuB-lymphocyte antigen CD20/CD20, Trx-His; MS4A1; CD20; MS4A-1; B1; Bp35; CVID5; LEU-16; MS4A2; S7
Species:	Human
Source:	E. coli
Accession:	P11836-1 (I141-S188)
Gene ID:	931
Molecular Weight:	18-22 kDa

### PROPERTIES

AA Sequence	I K I S H F L K M E    S L N F I R A H T P    Y I N I Y N C E P A    N P S E K N S P S T Q Y C Y S I Q S
Appearance	Solution.
Formulation	Supplied as a 0.2 µm filtered solution of 50 mM Tris-HCl, 150 mM NaCl, 1 mM EDTA, pH 8.0.
Endotoxin Level	<1 EU/µg, determined by LAL method.
Reconstitution	N/A.
Storage & Stability	Stored at -80°C for 1 year from date of receipt. It is stable at -20°C for 3 months after opening. It is recommended to freeze aliquots at -80°C for extended storage. Avoid repeated freeze-thaw cycles.
Shipping	Shipping with dry ice

### DESCRIPTION

Background	CD20 is a non-glycosylated protein expressed on the surface of normal and malignant B lymphocytes, and belongs to the MS4A (membrane-spanning 4-domain family A) protein family. Human cluster of differentiation 20 (CD20) is an integral membrane protein expressed during B lymphocyte development. CD20 is involved in intracellular calcium signaling associated with the B cell receptor. CD20 is also expressed in malignant B cells and is the target of approved therapeutic monoclonal antibodies (mAbs), which are divided into two groups, type I and type II, on the basis of two signature differences: Type I mAbs recruit complement more potently than type II mAbs and therefore induce robust complement-dependent cytotoxicity (CDC); type I mAbs bind twice as many type II mAbs to a given B cell type <sup>[1][2]</sup> .
