

Anti-Mouse TIM-4 Antibody (RMT4-54)

Cat. No.:	HY-P990152
Molecular Weight:	150000
Target:	ERK; Akt
Pathway:	MAPK/ERK Pathway; Stem Cell/Wnt; PI3K/Akt/mTOR
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Anti-Mouse TIM-4 Antibody (RMT4-54) is a rat-derived IgG2a, κ type antibody inhibitor, targeting to mouse TIM-4.
In Vitro	The antibody framework is stable, specific and adaptable, and has the ability to bind both antigens and endogenous immune receptors. Monoclonal antibodies have several derivatives, including bispecific antibodies, antibody-drug conjugates, and antibody fragments, and have significant effects in fields such as immunology and oncology. When designing inhibitory antibodies, considerations include identification of antigen-specific variable regions, choice of expression system, use of multispecific formats, and antibody derivatives based on fragmentation, oligomerization, or conjugation with other functional moieties ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
