Product Data Sheet

Anti-Mouse/Rat/Human PD-L1 Antibody (368A.4H1)

Cat. No.: HY-P990173 Molecular Weight: 150000 Target: Others Pathway: Others

Storage: Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Anti-Mouse/Rat/Human PD-L1 Antibody (368A.4H1) is a mouse-derived IgG1, κ type antibody inhibitor, targeting to mouse/rat/human PD-L1.
In Vitro	The antibody framework is stable, specific and adaptable, and has the ability to bind both antigens and endogenous immune receptors. Monoclonal antibodies have several derivatives, including bispecific antibodies, antibody-drug conjugates, and antibody fragments, and have significant effects in fields such as immunology and oncology. When designing inhibitory antibodies, considerations include identification of antigen-specific variable regions, choice of expression system, use of multispecific formats, and antibody derivatives based on fragmentation, oligomerization, or conjugation with other functional moieties ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
