

Mouse IgG2a (D265A) kappa, isotype control

Cat. No.:	HY-P990183
Molecular Weight:	150000
Target:	Others
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Mouse IgG2a (D265A) kappa, isotype control is a mouse-derived IgG2a type antibody inhibitor, targeting to mouse IgG2a.
In Vitro	The antibody framework is stable, specific and adaptable, and has the ability to bind both antigens and endogenous immune receptors. Monoclonal antibodies have several derivatives, including bispecific antibodies, antibody-drug conjugates, and antibody fragments, and have significant effects in fields such as immunology and oncology. When designing inhibitory antibodies, considerations include identification of antigen-specific variable regions, choice of expression system, use of multispecific formats, and antibody derivatives based on fragmentation, oligomerization, or conjugation with other functional moieties ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
