

Anti-Mouse MHC Class I (H-2Kd) Antibody (HB-159))

Cat. No.:	HY-P990194
Molecular Weight:	150000
Target:	Others
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Anti-Mouse MHC Class I (H-2Kd) Antibody (HB-159)) is a mouse-derived IgG2a, κ type antibody inhibitor, targeting to mouse MHC Class I.
In Vitro	<p>The antibody framework is stable, specific and adaptable, and has the ability to bind both antigens and endogenous immune receptors. Monoclonal antibodies have several derivatives, including bispecific antibodies, antibody-drug conjugates, and antibody fragments, and have significant effects in fields such as immunology and oncology. When designing inhibitory antibodies, considerations include identification of antigen-specific variable regions, choice of expression system, use of multispecific formats, and antibody derivatives based on fragmentation, oligomerization, or conjugation with other functional moieties^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
