## **Ficlatuzumab**

 Cat. No.:
 HY-P99196

 CAS No.:
 1174900-84-5

 Target:
 c-Met/HGFR

Pathway: Protein Tyrosine Kinase/RTK

**Storage:** Please store the product under the recommended conditions in the Certificate of Analysis.

### **BIOLOGICAL ACTIVITY**

Description	Ficlatuzumab is a monoclonal antibody (McAb) targeting human hepatocyte growth factor (HGF). Ficlatuzumab blocks the activation of the HGF/c-Met signaling pathway, and inhibits c-Met receptor-mediated cancer cell proliferation, migration, and invasion <sup>[1]</sup> .
IC <sub>50</sub> & Target	$HGF/c\text{-Met}^{[1]}$
In Vitro	Ficlatuzumab (20 $\mu$ g/mL; 24 h) effectively decreases tumor-associated fibroblast (TAF)-conditioned media-facilitated HNSCC migration and invasion <sup>[1]</sup> . Ficlatuzumab (20 $\mu$ g/mL; 24 h) effectively mitigates TAF-facilitated epithelial-tomesenchymal transition (EMT), Vimentin expression in HNSCC cells <sup>[1]</sup> . Ficlatuzumab (20 $\mu$ g/mL; 72 h) reduces proliferation induced by TAF-secreted hepatocyte growth factor (HGF) in HNSCC cells <sup>[1]</sup> . Ficlatuzumab (20 $\mu$ g/mL; 16 h) reduces the phosphorylation of c-Met and p44/42 MAPK in HNSCC cells compared with cells treated with recombinant HGF alone <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
