

Andecaliximab

Cat. No.:	HY-P99351
CAS No.:	1518996-49-0
Target:	MMP
Pathway:	Metabolic Enzyme/Protease
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Andecaliximab is a recombinant chimeric IgG4 monoclonal antibody (mAb) targets matrix metalloproteinase 9 (MMP9). Andecaliximab shows the antifibrotic efficacy in idiopathic pulmonary fibrosis mouse models. Andecaliximab can be used for the research of gastric adenocarcinoma and idiopathic pulmonary fibrosis (IPF) ^{[1][2]} .	
In Vitro	Andecaliximab increases serum IL-7 levels ^[1] . Andecaliximab (50 µg/mL; 24 h) reduces phosphorylated SMAD2 (pSMAD2) of ABC-like cell lines ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.	
In Vivo	Andecaliximab improves T-cell receptor (TCR) diversity (decreased clonality) within tumor-infiltrating T-cell ^[1] . Andecaliximab (20 mg/kg; i.p. once) shows the antifibrotic efficacy in a humanized NSG mouse model of idiopathic pulmonary fibrosis ^[2] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.	
	Animal Model:	Humanized nonobese diabetic, SCID, IL-2 receptor g (NSG) mouse model of IPF ^[2]
	Dosage:	20 mg/kg
	Administration:	Intraperitoneal injection; 20 mg/kg, once a week for once
	Result:	Decreased SMAD2 phosphorylation and increased surfactant protein C. Reduced MMP9 ⁺ cells, including MMP9 ⁺ , CCR10 ⁺ and MMP9 ⁺ CD45 ⁻ and EpCAM ⁺ CCR10 ⁺ subpopulations.
