

## Beludavimab

Cat. No.:	HY-P99467
CAS No.:	2423016-74-2
Target:	SARS-CoV
Pathway:	Anti-infection
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

Description	<p>Beludavimab (BMS 4182137; VIR 7832) is a monoclonal antibody targeting the spike glycoprotein of SARS-CoV-2. Beludavimab binds to recombinant spike protein receptor-binding domain (S-RBD) with an EC<sub>50</sub> value of 14.9 ng/mL and a K<sub>d</sub> of 0.21 nM<sup>[1]</sup>.</p>
In Vitro	<p>Beludavimab (VIR 7832) targets an epitope containing a glycan (at position N343) that is highly conserved within the Sarbecovirus subgenus in a region of the S receptor binding domain (RBD) that does not compete with angiotensin converting enzyme 2 (ACE2) binding. Beludavimab possesses an Fc “LS” mutation that confers extended half-life by binding to the neonatal Fc receptor<sup>[1]</sup>.</p> <p>Beludavimab induces NK cell-mediated antibody-dependent cellular cytotoxicity (ADCC) in cells from donors expressing the low-affinity F/F158 allele of FcγIIIa more efficiently. Beludavimab neutralizes wild-type and variant pseudotyped viruses and authentic virus in vitro<sup>[1]</sup>.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
