

Tadocizumab

Cat. No.:	HY-P99560
CAS No.:	339086-80-5
Target:	Integrin
Pathway:	Cytoskeleton
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY

Description	Tadocizumab (C4G1; YM-337) is a humanized monoclonal antibody targeting integrin α IIb β 3. Tadocizumab has antiplatelet and antithrombotic effects, and can be used for cardiovascular disease research ^{[1][2]} .
IC₅₀ & Target	GPIIb/IIIa
In Vitro	<p>Tadocizumab (YM-337) significantly inhibits ex vivo ADP-induced platelet aggregation, and completely inhibits arachidonic acid-induced platelet aggregation^[1].</p> <p>Tadocizumab (YM-337) inhibits human platelet adhesion to von Willebrand factor, fibrinogen, fibronectin and subendothelial matrix^[2].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
In Vivo	<p>Tadocizumab (YM-337; C4G1) dose-dependently inhibits ex vivo platelet aggregation, with complete inhibition at doses higher than 0.25 mg/kg intravenous injection or 1.5 μg/kg/min infusion in rhesus monkeys^[1].</p> <p>Tadocizumab (YM-337; C4G1) at a dose of 1 mg/kg intravenous injection followed by 6 μg/kg/min infusion for 60 min prevented occlusive thrombus formation in monkeys, in a photochemically-induced thrombosis model in squirrel monkeys^[1].</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
