Inhibitors • Screening Libraries • Proteins

rno-miR-509-3p inhibitor

Cat. No.:	HY-RI04504
Molecular Weight:	6591.39
Target:	MicroRNA
Pathway:	Epigenetics
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

BIOLOGICAL ACTIVITY	
Description rno inh	p-miR-509-3p inhibitors are chemically-modified oligonucleotides that hybridize with mature miRNAs. The miRNA hibitors have full-length nucleotide 2'-methoxy modification. The miRNA inhibitors strongly compete with mature miRNAs prevent the complementary pairing of miRNAs and their target genes, thereby inhibiting miRNAs from functioning.
1.1 1.2 For 1.3 1.4 2.F 2.1 Not 3.T 3.1 For Pol For	miRNA Resuspension B relefly centrifuge the tube to ensure that the dried miRNA is at the bottom of the tube. P Resuspend the miRNA using nuclease free water to generate 20 µM stock solution. r 5 nmol miRNA: add 250 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 30 nmol miRNA: add 1000 µL nuclease free water. r 40 nmol miRNA: add 1000 µL nuclease free water. r 50 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 10 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free water. r 20 nmol miRNA: add 1000 µL nuclease free moli mit free freezer until use. r per well of a 6-well plate: A: 120 µL serum-free medium + 5 µL miRNA inhibitors; B: 121 µL serum-free medium + 4 µL lyFast Transfection Reagent (HY-K1014). r per well of a 24-well plate: A: 23.75 µL serum-free medium + 1.25 µL miRNA inhibitors; B: 24 µL serum-free medium + 1 µL lyFast Transfection Reagent (HY-K1014). r per well of a 96-well plate: A: 4.75 µL serum-free medium + 0.25 µL miRNA inhibitors; B: 4.8 µL serum-free medium + 0.25 µL mol nu finibitors; B: 4.8 µL serum-free medium + 0.2 µ holyFast Transfection Reagent (HY-K1014).

Note: The recommended working concentration is 100nM for miRNA inhibitors. miRNA function can vary greatly, depending on the miRNA, the cell line, and the chosen analysis method. To determine the concentration that provides optimal results, optimization experiments using varying mimic/inhibitor concentrations should be performed. The optimized range suggests changing the miRNA concentration in the range of 20 to 500nM.

If other transfection reagents are used, the amount of transfection reagent needs to be adjusted according to the specific situation.

3.2 Mix the diluted PolyFast Transfection Reagent and miRNA gently. Incubate at room temperature for 15 minutes.

3.3 Remove culture medium from cells, wash with PBS.

3.4 Add transfection mix (A+B) to cells.

For per well of a 6-well plate: add 1750 μ L fresh medium without Pen/Strep, then add 250 μ L of the transfection mix (A+B) to the well, and mix well.

For per well of a 24-well plate: add 450 μ L fresh medium without Pen/Strep, then add 50 μ L of the transfection mix (A+B) to the well, and mix well.

For per well of a 96-well plate: add 90 μ L fresh medium without Pen/Strep, then add 10 μ L of the transfection mix (A+B) to the well, and mix well.

3.5 Incubate cells for 1–3 days at 37°C. Then, analyze transfected cells. The medium can be replaced with fresh serumcontaining medium after 6 hours if necessary.

MCE has not independently confirmed the accuracy of these methods. They are for reference only.

Caution: Product has not been fully validated for medical applications. For research use only.
