

Ethyl Laurate

Cat. No.:	HY-W009684
CAS No.:	106-33-2
Molecular Formula:	C ₁₄ H ₂₈ O ₂
Molecular Weight:	228.38
Target:	Biochemical Assay Reagents
Pathway:	Others
Storage:	<div>Pure form -20°C 3 years</div> <div>In solvent -80°C 6 months</div> <div> -20°C 1 month</div>

BIOLOGICAL ACTIVITY

Description	Ethyl Laurate is an organic compound commonly used as a flavoring and food additive. It can be used to make fruit, mint and sweet flavors, and is widely used in some food processing and cosmetic production. In addition, this compound is also used as a reagent and intermediate in some organic synthesis reactions.
In Vitro	<p>Ethyl dodecanoate is a biochemical reagent that can be used as a biological material or organic compound for life science related research.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>

Caution: Product has not been fully validated for medical applications. For research use only.
