

N-Acetyl-L-glutamic acid-d₅

Cat. No.:	HY-W015240S
Molecular Formula:	C ₇ H ₆ D ₅ NO ₅
Molecular Weight:	194.2
Target:	Endogenous Metabolite; Endogenous Metabolite; Isotope-Labeled Compounds
Pathway:	Metabolic Enzyme/Protease; Others
Storage:	Powder -20°C 3 years 4°C 2 years In solvent -80°C 6 months -20°C 1 month

BIOLOGICAL ACTIVITY

Description	N-Acetyl-L-glutamic acid-d ₅ is the deuterium labeled N-Acetyl-L-glutamic acid. N-Acetyl-L-glutamic acid, a N-acyl-L-amino acid, is a component of animal cell culturing media. N-Acetyl-L-glutamic acid is a metabolite of <i>Saccharomyces cerevisiae</i> and human ^[1] .
In Vitro	Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
