BIOLOGICAL ACTIVITY

Description	2-Chloroadenine (6-Amino-2-chloropurine) is a biochemical reagent that can be used as a biological material or organic compound for life science related research.
In Vitro	<p>2-Chloroadenine is a heterocyclic building block that has been used in the synthesis of adenosine antimetabolites with antineoplastic activity. It is also the major catabolite of 2-chloro-2'-deoxyadenosine.</p> <p>MCE has not independently confirmed the accuracy of these methods. They are for reference only.</p>
