

## 1-Octanol-d<sub>17</sub>

|                           |   |       |          |
|---------------------------|---|-------|----------|
| <b>Cat. No.:</b>          | HY-W032013S   |       |          |
| <b>CAS No.:</b>           | 153336-13-1   |       |          |
| <b>Molecular Formula:</b> | C <sub>8</sub> HD <sub>17</sub> O   |       |          |
| <b>Molecular Weight:</b>  | 147.33  |       |          |
| <b>Target:</b>            | Calcium Channel; Endogenous Metabolite  |       |          |
| <b>Pathway:</b>           | Membrane Transporter/Ion Channel; Neuronal Signaling; Metabolic Enzyme/Protease |       |          |
| <b>Storage:</b>           | Pure form   | -20°C | 3 years  |
|                           |   | 4°C   | 2 years  |
|                           | In solvent  | -80°C | 6 months |
|                           |   | -20°C | 1 month  |

### BIOLOGICAL ACTIVITY

#### Description

1-Octanol-d<sub>17</sub> is the deuterium labeled 1-Octanol[1]. 1-Octanol (Octanol), a saturated fatty alcohol, is a T-type calcium channels (T-channels) inhibitor with an IC<sub>50</sub> of 4 μM for native T-currents[2]. 1-Octanol is a highly attractive biofuel with diesel-like properties[3].

#### In Vitro

Stable heavy isotopes of hydrogen, carbon, and other elements have been incorporated into drug molecules, largely as tracers for quantitation during the drug development process. Deuteration has gained attention because of its potential to affect the pharmacokinetic and metabolic profiles of drugs<sup>[1]</sup>.  
MCE has not independently confirmed the accuracy of these methods. They are for reference only.
