## **BIOLOGICAL ACTIVITY**

Description	$He xae thy lene \ glycol\ monomethyl\ ether\ is\ a\ PEG-based\ PROTAC\ linker\ that\ can\ be\ used\ in\ the\ synthesis\ of\ PROTACs^{[1]}.$
IC <sub>50</sub> & Target	PEGs
In Vitro	PROTACs contain two different ligands connected by a linker; one is a ligand for an E3 ubiquitin ligase and the other is for the target protein. PROTACs exploit the intracellular ubiquitin-proteasome system to selectively degrade target proteins <sup>[1]</sup> . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
