BIOLOGICAL ACTIVITY

Description	3,4-Dimethoxychalcone is a Caloric restriction mimetics (CRMs). 3,4-Dimethoxychalcone induces the deacetylation of cytoplasmic proteins and stimulates autophagy flux. 3,4-Dimethoxychalcone can be used for cardiac and cancer diseases research ^[1] .
In Vitro	3,4-Dimethoxychalcone (30 μ M, 8 h) induces autophagic flux in HepG2 cells and U2OS cells ^[1] . 3,4-Dimethoxychalcone (30 μ M, 6 h) stimulates the translocation of TFEB and TFE3 to the nucleus in U2OS cells ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
In Vivo	3,4-Dimethoxychalcone (230 mg/kg for intraperitoneal injection) induces the nuclear translocation of TFEB and TFE3 of liver and heart tissues in Female C57/BL6 mice ^[1] . MCE has not independently confirmed the accuracy of these methods. They are for reference only.
