

## (2-Bromoethyl)benzene

Cat. No.:	HY-Y0199
CAS No.:	103-63-9
Molecular Formula:	C <sub>8</sub> H <sub>9</sub> Br
Molecular Weight:	185.06
Target:	Biochemical Assay Reagents
Pathway:	Others
Storage:	Please store the product under the recommended conditions in the Certificate of Analysis.

### BIOLOGICAL ACTIVITY

Description	β-Phenethyl bromide is a biochemical reagent that can be used as a biological material or organic compound for life science related research.
In Vitro	Phenethylbromide is an analytical reference material that is structurally categorized as an organobromide. It is used in the synthesis of a variety of compounds, including fentanyl. Phenethylbromide is combined with 4-piperidinone to produce N-phenethyl-4-piperid one, which, as a precursor in the synthesis of fentanyl, is scheduled as a List I chemical in the United States. Phenethylbromide may be found as in impurity in samples of fentanyl produced using this pathway. MCE has not independently confirmed the accuracy of these methods. They are for reference only.

**Caution: Product has not been fully validated for medical applications. For research use only.**
