2 Introduction

The 100 bp DNA Marker is provided in a solution of $1 \times DNA$ Loading Buffer, which can be directly used for nucleic acid electrophoresis analysis. The Marker contains 10 double-stranded DNA fragments ranging from 100 bp to 1000 bp. $5 \mu L$ of this product contains about 120 ng for the 500 bp band, and about 50 ng for the other bands.

4 Protocol

- 1. Add $5 \mu L$ of 100 bp DNA Marker to sample well of the agarose gel and perform electrophoresis.
- 2. After electrophoresis, stain with Nucleic Acid Gel Stain and detect the electrophoresis results.

Note: a) 1.2-2.0% agarose gel at 5-10 V/cm is recommended.

- b) Adjust the loading volume of DNA Marker for different loading well format.
- c) Pre-dyeing or post-dyeing is suitable when using the Nucleic Acid Gel Stain.

5 Storage

-20°C, 2 years.

Avoid repetitive freeze-thaw cycles.

6 Precautions

- 1. For short-term use, DNA Marker may be stored at 2-8°C.
- 2. Replace the electrophoresis buffer in time and use fresh agarose gels to achieve better electrophoretic results.
- 3. When the concentration of agarose gel is too low, the bands will not be easy to separate.
- 4. This product is for R&D use only, not for drug, household, or other uses.
- 5. Please consult the Material Safety Data Sheet for information regarding hazards and safe handling practices.
